Subject: What a great product!

I was introduced to this product, and was amazed at how well it really worked. I thought that it would be just like all the other sports creams, but it wasn't. I have a really bad hip and applied the gel to my whole hip and thigh area just before falling asleep. I figured if I only got a few hours of sleep, it was certainly better than the night before. Boy, when I woke that next morning, the pain that I had been experiencing for two weeks was GONE. Not only was it gone the pain never came back like with all other sports creams.

I am interested in getting some samples for my co-workers who sit at a computer all day and are complaining of the same pains in their hips, shoulders, wrists, hands and lower backs. I am also interested in obtaining a tube for myself.

Thanks for relieving my pain.

Kathy Koeck

**For every case  
of repetitive motion injuries-  
25 workdays are lost. Most of  
this loss is from sub-par job  
performance as a result of the  
pain rather than  
absenteeism.**

Journal of American Medical Association  
*Workers were asked about any absent days or lost on-the job  
productivity during the previous two weeks.*  
Nearly 53 percent reported having pain during the previous two weeks, and 13 percent said they had a pain-related loss in productivity. The average amount of lost time was 4.6 hours per week.
